See us at BVE!

Broadcast Video Expo is here again and we hope that you will come and see us on Stand No. i40 from the 16-18th February.

All the usual suspects will be there—Glyn, Cathy and Bridget so if you're there - come and say 'hello'!

Get the low-down at BVE:

- ContentProbe CRF
- ContentProbe MRF
- ContentProbe 'Lite' Client
- Archive Manager
- Audio/Radio ContentProbes
- And More...

Next show after BVE is NAB, more to follow

Low-cost Recorder - MRF

The new MRF monitoring recorder range offers savings of nearly 50% compared with previous models. (For specification, E-mail sales@ideasunlimited.tv)

The MRF ContentProbe has been designed for monitoring & low-cost compliance recording of video and audio for periods of up to 300 days. The MRF model complies with UK regulatory requirements for quality and will be suitable for those customers not wishing to opt for the extra redundancy that our CRF range has.

Capture - Up to four TV channels can be captured in one unit taking up just one rack space. The capture is continuous 24x7 and includes timecode.

Currently, the unit is available with Composite or SD inputs and HD is coming soon.

Monitor - The MRF offers easy viewing of both live and pre-recorded material at the desktop. It has VCR-like controls for ease of use and comes with configurable alarms to alert users to On-Air audio or video faults.

Manage - Old material is located by channel, date and time. The optional XML data import system enables integration with EPGs and As-Run logs giving access to material also by program name.

Bookmarking - Operators can mark up clips for viewing or action by others by inserting 'bookmarks', and it is easy to export marked up 'clips' for archive or copying to DVD. Exported media can be viewed using Windows Media Player©.

Radio Compliance recorder, new ContentProbe launch at BVE

We will be launching a new range of audio only ContentProbes at BVE.

These will record up to 32 channels of AES/EBU audio or up to 16 FM Radio channels using internal tuners and are ideal for regulatory and logging applications. We will also have a model with 16 balanced analogue inputs.

"Adding a dedicated radio model to our range enables us to offer complete solutions for TV and Radio broadcasters" says Cathy Ayres, "with a single user interface at a very competitive price, we can help to keep costs down for the broadcaster, it's a very neat solution for legal compliance".

For specification contact: Sales@ideasUnlimited.tv

E-mail Cathy@ideasunlimited.tv Tel +44 870 162 7200

"I would be great to meet you in person at BVE, please contact me to arrange an appointment" . Cathy Ayres, Sales Director.

Recent Software Releases

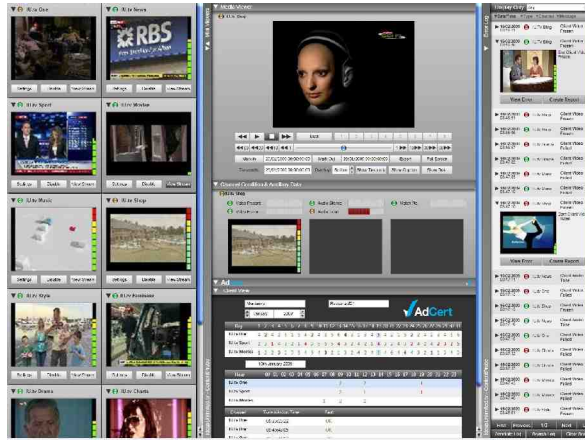

Archive Manager software module

If you want more storage days or want a backup of your material, this application is for you!

The Archive Manager will automatically copy the oldest material off to a separate storage device on the network. This storage could be part of a large archive system or an IT server. The NAS itself is not supplied by IdeasUnlimited. Alternatively the Archive Manager can start copying from 'x' number of days in order to provide a backup. For example the archive could be set to copy material after 7 days.

Storing the archived material.

The media archive path is setup on the ContentProbe server and each channel's recordings will be

New Client interface out later this year

stored in a separate directory at that location. The archived material can be located firstly by the channel name and then date. The files are stored as 'hour files' but can be viewed as a seamless stream.

Archive management

The Archive Manager Module can be set to automatically manage the storage area

assigned to it on a FIFO basis, alternatively this can be managed manually if required.

You can add the Archive Application at any time and it can be bought on a per channel basis. This is a very low-cost way of extending the storage of your ContentProbe whilst utilising your existing IT storage.

Viewing archived material

Our new "Lite" Client allows large numbers of users to simultaneously access the archived material. If access to the archive server is permitted by the Client PC, old material may also be viewed in the ContentProbe Desktop Client Application as normal.

Individual hour files may also be viewed using Windows® Media Player.

Introducing the New 'Lite' Client Software

A budget-beating solution allowing lots of people to view the same media!

The new 'Lite' Compliance Player will fit around your existing ContentProbe system and is designed for use with our new Archive Manager Module. The 'Lite' Client provides an easy and flexible route to browse media.

The 'Lite' client will allow as many users as your IT structure will support to browse archived media. Once the application has been configured with the archive locations, it is simple to find and access material, through a familiar user interface. For more info contact Sales@ideasunlimited.tv

Current Server software is version 2.05.06 and the Client is now version 1.46.

Over the last 2 years a number of releases has seen the software improve in its overall robustness and versatility. All customers should upgrade

More from Support!

support@ideasunlimited.tv

to current software in order to reap the benefits of the improvements. If you have a support contract then you may download the software free of charge.

Are you aware of our super Aladdin deal—50% discount?

We started this deal last year—and it's been a great success! Many customers qualify for our like-for-like swap out at 50% off the current list price! An old unit—for a new unit! It's a brilliant deal and if you thought it wasn't worth taking out a support contract anymore—think again!
